Experience

Bug Tracking Website

An easy to use bug-tracking website that allows users to track bugs in their projects and collaborate with team members. Built using React, Node.js, Express, and MongoDB.

Financial Portal Website

A financial portal website that allows users to track transactions and budget for the future. Built using React, Spring Boot, and MySQL.

Computer Networking Research Project

A research project that compared the performance between the Transmission Control Protocol and a reliable version of the User Datagram Protocol. The performance of the protocols was compared using Java, C#, and Python.
